

Suspicious Transaction Report

Case dossiers for high-risk customers | March 2026 batch | DRAFT for internal review

This draft is generated from the AML Transaction Monitoring Dashboard (Excel). It uses a sample dataset with fictional customers to demonstrate the workflow. The actual STR is filed on the FIU-IND FINnet portal in its prescribed format; the narratives here are written to be copied into that filing.

Detection rules (as built in the workbook)

Rule	Logic
Near threshold	Cash credit of Rs 45,000 to Rs 49,999 or Rs 9,00,000 to Rs 9,99,999.
Turnover ratio	All credits of the customer divided by declared monthly income (income of 0 is treated as 1).
Structuring	Near-threshold cash credit and at least 2 such credits by the same customer on the same day or the 2 days before.
Mule / pass-through	Debit of Rs 50,000 or more that is at least 95% of the customer's credits in the previous 1 day.
Dormant velocity	Credit of Rs 10,00,000 or more with no other transaction by the customer in the previous 180 days.
Final risk rating	HIGH RISK if any alert fires or turnover ratio is 5 or more; otherwise LOW RISK. The ratio is per customer, so all transactions of such a customer are rated HIGH.
